*“Committed To Excellence In Community Service”*

Dear Resident:

RE: Carlisle Spring Road Water Main Replacement Project

The Borough of Carlisle has contracted with Ankiewicz Enterprises, Inc. to replace the 16-inch diameter water main under Carlisle Springs Road from E Street south to the railroad crossing near N. Hanover Street. The existing pipe is over 100 years old and at the end of its operating life. The contractor will be replacing the water main, water valves, hydrants, and service lines in the project area with new components. This will require the contractor to excavate a trench within Carlisle Spring Road to remove the old water pipe and place the new pipe in the same trench before backfilling and surface restoration. A map of the project area is included with this letter.

The Borough is coordinating this work with the redevelopment of the former Masland industrial site. Ankiewicz Enterprises expects to start construction activities the beginning of October and complete the replacement project by mid to late December. It is the contractor's responsibility to insure water service to all Borough customers remains active during the project. This may require the contractor to place a temporary water service line to a few properties along the work area during construction. The contractor will be in touch with you if your property will need temporary service.

Carlisle Springs Road is a PennDOT highway. As such, the Borough needed to secure a permit from PennDOT before it could undertake any work within the state roadway. PennDOT is only allowing the contractor to occupy the road between the hours of 9:00 am and 3:00 pm during the day and from 6:00 pm to 6:00am at night. Due to these limited daytime work hours, Borough Council has granted the contractor permission to work during the night hours to shorten the duration of the project. The contractor is estimating that limiting his work between 9 am and 3 pm would add 2 to 3 months to the project. The PennDOT permit requires the contractor to maintain at least one lane of travel on Carlisle Springs Road during the times the contractor is occupying the road. The contractor will install signs and provide flaggers to direct traffic through the active construction site.

We apologize for any inconvenience the construction work may cause. The project is needed to maintain the Borough's water infrastructure and ensure safe, clean drinking water to our customers. Thank you in advance for your patience and understanding. Please call the Borough's Public Works Department at 717-240-6930 if you have any questions related to the project.
